

You are continuing development of an **existing Insolvency / NCLT Case Management System**.

The project already has a basic interface, case workspaces, and other functionality.

Do NOT rebuild the project.

Do NOT create a separate application.

Inspect the current repository first and integrate this feature into the existing architecture.

This task is focused specifically on:

CoC Document Workflow

The required workflow is:

Do not use AI.

Do not use any paid APIs or paid document-generation service.

Use deterministic template-based document generation.

1. FIRST INSPECT THE EXISTING PROJECT

Before coding, inspect:

- existing Case model;
- existing CoC module;
- meeting model;
- agenda model;
- task model;
- contacts;
- creditor/member records;
- documents;
- email integration if already present;
- authentication;
- database;
- frontend structure;
- backend;
- document-generation code if already present.

Reuse existing functionality.

Do not create duplicate systems if equivalent functionality already exists.

2. REFERENCE WORD DOCUMENTS

The following Word files are the actual office formats and must be treated as the reference templates.

First CoC Notice

Mahakali_Foods_Notice_First_CoC_Meeting_Draft(1).docx

Subsequent CoC Notice

Notice of 2nd CoC Meeting (1).docx

First CoC Minutes

Minutes of 1st CoC meeting Premier Proteins Ltd (1).docx

Subsequent CoC Minutes

Minutes of 2nd CoC meeting Premier Proteins Ltd (1).docx

Additional templates that may later use the same engine:

Constitution of CoC Members (1).docx

Mahakali_Foods_Final_CoC_Constitution_Report(2).docx

Mahakali_Foods_Final_NCLT_CoC_Application(1).docx

Do not redesign these documents.

Preserve as closely as possible:

- fonts;
- headings;
- margins;
- page layout;
- tables;
- borders;
- header/footer;
- numbering;
- spacing;
- signature blocks;
- legal boilerplate;
- page numbers.

The objective is that the generated Word document should look like the existing office document, not like a newly designed template.

3. TEMPLATE ENGINE

Use an appropriate free/open-source Word templating system.

Preferred if Python is available:

docxtp1
python-docx

Use docxtp1 where it simplifies:

- merge variables;

- conditional blocks;
- loops;
- dynamic tables.

Use python-docx where necessary to preserve or manipulate formatting.

If the existing project uses another suitable library, reuse it.

Do not introduce a paid dependency.

4. IMPORTANT DOCUMENT DESIGN PRINCIPLE

Each document contains three types of content.

TYPE A — AUTOMATIC DATABASE DATA

Examples:

Corporate Debtor Name

CIN

NCLT Bench

Case Number

CIRP Commencement Date

IRP/RP Name

IBBI Registration Number

AFA Validity

Professional Address

Process-Specific Email

Registered Email

CoC Members

Admitted Claims

Voting Shares

Member Emails

Suspended Directors

Director Emails

Meeting Number

Meeting Date

Meeting Time

Meeting Mode

Venue

Notice Date

These values should come automatically from the existing case database wherever available.

The user should not repeatedly type them.

TYPE B — STANDARD TEMPLATE CONTENT

Examples:

statutory notice wording

standard quorum language

standard roll-call language

standard representation language

standard notes to agenda

standard signature section

standard voting instructions

standard recurring resolution wording

This content should remain in the template.

It should normally be pre-filled.

Where appropriate, make it editable before final generation, but the office should not have to rewrite it every time.

TYPE C — CASE-SPECIFIC / MEETING-SPECIFIC CONTENT

This is the content that the Insolvency Professional will enter manually.

Examples:

actual discussion under an agenda item

specific factual update

explanation given to CoC

specific state of affairs

management update

commercial discussion

decision of members

additional matter discussed

actual resolution modifications

comments/observations

Provide large editable text fields for this content.

The software must NOT attempt to write this content automatically.

5. COC MEETING DATA MODEL

Reuse the existing meeting model if one exists.

If fields are missing, extend it minimally.

A CoC meeting should support:

case_id

meeting_number

meeting_type
FIRST_COC
SUBSEQUENT_COC

meeting_date

scheduled_time

actual_start_time

actual_end_time

meeting_mode
PHYSICAL
VIDEO
HYBRID

venue

video_meeting_link

notice_date

status

DRAFT

NOTICE_PREPARED

NOTICE_SENT

MEETING_COMPLETED

MINUTES_DRAFT

MINUTES_FINAL

MINUTES_SENT

created_by

created_at

updated_at

Adapt field naming to the existing application.

6. AGENDA MODEL

Agenda items must be stored separately rather than storing the complete agenda as one text blob.

Each agenda item should support:

id

meeting_id

agenda_number

title

agenda_type

standard_text

custom_pre_meeting_note

discussion_text

decision_text

resolution_required

resolution_text

vote_required

display_order

This allows the same agenda items used in the Notice to automatically appear later when Minutes are prepared.

7. NOTICE → MINUTES CONTINUITY

This is a major requirement.

When a CoC Notice is created:

Agenda 1

Agenda 2

Agenda 3

...

must be saved into the meeting database.

Later, when the meeting is completed and the user clicks:

Prepare Minutes

the exact same agenda items should automatically appear.

The user should NOT enter the agenda again.

Workflow:

Notice

Agenda stored

Meeting

Minutes form automatically uses stored agenda

8. FIRST COC NOTICE TEMPLATE

Use the Mahakali First CoC Notice as the reference.

The generated document should contain the same general structure:

Title Page

Table of Contents

Notice

Parties to whom Notice Served

CoC Members Table

Suspended Directors Table

Agenda

Matters to be Discussed

Issues to be Voted Upon

E-Voting Instructions

Notes to Agenda

Annexures / other standard sections where applicable

Do not copy case-specific values permanently into the template.

Convert them to template variables.

9. SUBSEQUENT COC NOTICE TEMPLATE

Use the Premier Proteins Second CoC Notice as the reference.

Subsequent meetings should support agenda items such as:

Approval of previous meeting minutes

Activities undertaken by RP

Form G

EOI

RFRP

Information Memorandum

Appointment of valuers

Expenses

Other case-specific items

Do not hardcode these exact items as mandatory.

They are examples.

The user must be able to:

Add Agenda Item

Remove Agenda Item

Reorder Agenda Item

Edit Agenda Item

10. STANDARD AGENDA LIBRARY

Create a reusable standard agenda library.

Examples:

Chairman of Meeting

Roll Call

Quorum

Approval of Previous Minutes

Constitution of CoC

Claims Status

Activities Undertaken by IRP/RP

State of Affairs

IRP/RP Remuneration

CIRP Expenses

Appointment of RP

Opening Process-Specific Bank Account

Reduction of Notice Period

Appointment of Registered Valuer

Appointment of Transaction Auditor

Publication of Form G

EOI Criteria

RFRP

Information Memorandum

Any Other Matter

The library should contain default wording.

The user may add an item from the library and then edit it.

Do not force every meeting to contain all items.

11. ATTENDANCE

When preparing minutes, display all expected attendees from:

CoC members

IRP/RP

Suspended Directors

other invitees where applicable

Allow the user to mark:

Present

Absent

Physical

Video
Other

For each CoC member automatically display:

Name
Representing Creditor
Voting Share

Use these fields to build the attendance table in the minutes.

12. QUORUM

If voting shares are stored and attendance is marked, calculate available voting share automatically.

However:

do not make a legal determination that overrides the professional user.

Display something like:

Voting share present: 67.25%

Allow the user to confirm:

Quorum Confirmed: Yes / No

Use the standard quorum paragraph from the Word template.

13. PREPARING MINUTES

When the user clicks:

Prepare Minutes

show a workflow such as:

Step 1 – Meeting Details

Step 2 – Attendance

Step 3 – Agenda Discussions

Step 4 – Resolutions & Voting

Step 5 – Review

Step 6 – Generate DOCX

14. AGENDA DISCUSSION FORM

For each agenda item display:

Agenda No.

Agenda Title

Standard / Default Text

Company-Specific Discussion
[large text area]

Decision / Outcome
[large text area]

Resolution Required?
[Yes / No]

Voting Required?
[Yes / No]

The most important field is:

Company-Specific Discussion

This field is entered manually by the Insolvency Professional.

The software should not generate this content.

15. FIXED VS EDITABLE CONTENT

Support three field behaviours.

Fixed

Examples:

basic header/footer
page numbering

signature structure
certain static labels

Default but Editable

Examples:

quorum paragraph
chairman paragraph
standard statutory explanation
standard resolution wording

Mandatory Manual Input

Examples:

actual discussion
case-specific factual update
decision/outcome

Make the distinction clear in the UI.

16. RESOLUTION LIBRARY

Create a reusable resolution library.

Possible resolution templates:

Appointment of RP

Approval of RP Remuneration

Approval of CIRP Expenses

Opening Process-Specific Bank Account

Reduction of Notice Period

Appointment of Registered Valuer

Appointment of Transaction Auditor

Publication of Form G

Approval of EOI Criteria

Approval of RFRP

Other

Each resolution template should have:

title

default_resolution_text

default_legal_reference

editable = true

The professional can modify the wording before finalisation.

17. VOTING RESULTS

For agenda items requiring a vote, allow:

For %

Against %

Abstain %

and:

Result:

PASSED

NOT PASSED

DEFERRED

NOT VOTED

Optionally also allow creditor-wise voting details later.

For the initial version, percentage totals are sufficient if that matches the current application architecture.

Validate:

For + Against + Abstain <= 100%

Allow warnings, not silent correction.

18. DYNAMIC COC TABLES

Do not create fixed table rows.

Generate CoC tables dynamically from the database.

Example fields:

Serial Number

Creditor Name

Category

Admitted Claim

Voting Share

Email

A case with two CoC members should generate two rows.

A case with twenty members should generate twenty rows.

19. SUSPENDED DIRECTOR TABLE

Generate dynamically using the case's current/suspended management records.

Fields:

Name

Designation

Email

Do not hardcode director details inside templates.

20. IMPORTANT TEMPLATE CLEANUP

The supplied templates contain some remnants of copied case information.

Therefore, while converting them into templates:

identify and replace ALL case-specific values such as:

company names

case numbers

dates

email IDs

professional details

meeting numbers

creditor names

voting percentages

addresses

with template variables.

Do not leave case-specific information from Mahakali or Premier Proteins inside reusable templates.

21. TEMPLATE VARIABLES

Use clear names such as:

```
{{ corporate_debtor_name }}
```

```
{{ cin }}
```

```
{{ case_number }}
```

```
{{ nclt_bench }}
```

```
{{ cirp_commencement_date }}
```

```
{{ meeting_number }}
```

```
{{ meeting_number_ordinal }}
```

```
{{ meeting_date }}
```

{{ meeting_time }}

{{ actual_start_time }}

{{ actual_end_time }}

{{ meeting_mode }}

{{ venue }}

{{ notice_date }}

{{ rp_name }}

{{ rp_role }}

{{ rp_registration_number }}

{{ afa_valid_until }}

{{ process_specific_email }}

{{ registered_email }}

{{ rp_address }}

Dynamic collections:

coc_members

suspended_directors

agenda_items

attendees

voting_items

22. CONDITIONAL SECTIONS

Support conditional blocks.

Examples:

```
IF meeting_mode == VIDEO
    show video-conferencing wording
```

```
IF meeting_mode == PHYSICAL
    show venue wording
```

```
IF meeting_mode == HYBRID
    show both
```

Also:

```
IF e_voting_required
    include e-voting instructions
```

```
IF suspended_directors exist
    include directors table
```

```
IF meeting_number > 1
    allow previous-minutes agenda item
```

Do not add unnecessary conditional complexity.

23. DOCUMENT GENERATION

Generate .docx as the primary output.

Suggested naming convention:

Notice_1st_CoC_Mahakali_Foods_2026-08-25.docx

Minutes_2nd_CoC_Premier_Proteins_2025-10-16.docx

Use safe filenames.

Save generated documents into the existing case document repository.

Link them to the CoC meeting.

24. DOCUMENT VERSIONS

Support:

Draft
Final

Prefer versioning such as:

Draft v1
Draft v2
Final v1

Do not overwrite final documents silently.

If a final document needs revision:
create a new version.

25. REVIEW BEFORE FINAL

After generation allow:

Download Draft

Review

Regenerate

Mark Final

Do not automatically email a newly generated document.

26. MAILING SYSTEM

Integrate the document workflow with the existing mailing system if one already exists.

If Gmail integration is not present, implement it using the official Gmail API and OAuth 2.0.

Do not store Gmail passwords.

Do not use Selenium/browser automation.

27. SEND NOTICE BY EMAIL

Once a CoC Notice is final:

provide:

Send Notice to CoC

Automatically populate recipients using:

CoC member email IDs

Suspended Director emails where applicable

Other selected recipients

Show a review screen:

To

CC

Subject

Body

Attachments

The user must click Send.

28. NOTICE EMAIL TEMPLATE

Create a reusable email template.

Example structure:

Subject:

Notice of {{ meeting_number_ordinal }} Meeting of Committee of Creditors of {{ corporate_debtor_name }}

Body:

Dear Sir/Madam,

Please find attached the Notice along with Agenda for the {{ meeting_number_ordinal }} Meeting of the Committee of Creditors of {{ corporate_debtor_name }}, scheduled to be held on {{ meeting_date }} at {{ meeting_time }}.

Kindly take the same on record and make it convenient to attend.

Regards,

{{ rp_name }}

{{ rp_role }}

The user may edit before sending.

29. SEND MINUTES BY EMAIL

Once Minutes are marked Final:

provide:

Send Minutes to CoC

Automatically attach the final minutes.

Recipients should come from the meeting/case database.

Show email review before sending.

30. MINUTES EMAIL TEMPLATE

Create reusable wording such as:

Subject:

Minutes of {{ meeting_number_ordinal }} Meeting of Committee of Creditors of
{{ corporate_debtor_name }}

Body:

Dear Sir/Madam,

Please find attached the Minutes of the {{ meeting_number_ordinal }} Meeting
of the Committee of Creditors of {{ corporate_debtor_name }}, held on {{ meeting_date }}.

Kindly take the same on record.

Regards,

{{ rp_name }}

{{ rp_role }}

Editable before send.

31. COMMUNICATION LOG

After sending, store:

case_id

meeting_id

document_id

sender

recipients

cc

subject

sent_at

Gmail message id

status

Use the existing communication model if present.

32. TASK COMPLETION

If existing tasks include:

Send CoC Notice

Prepare Minutes

Circulate Minutes

automatically update them when the corresponding action is successfully completed.

Example:

Notice email successfully sent
→ task "Circulate Notice" completed

Do not complete the task if Gmail sending fails.

33. ERROR HANDLING

If document generation fails:

do not corrupt meeting/case data.

If Gmail fails:

do not mark email as sent.

Show clear retry capability.

If one recipient email is missing:

show:

Missing Email:
Bank of India

and require the user to fix/skip intentionally.

34. NO AI

Do NOT use:

OpenAI
Gemini
Claude
local LLM
AI writing
AI summarisation

for this module.

The Insolvency Professional provides the actual meeting discussion.

The software provides structure and automation.

35. DATA SAFETY

Do not modify the original Word reference files directly.

Make working copies/templates.

Keep originals unchanged.

Generated documents should be linked to the correct case and meeting.

36. TEST USING BOTH CASE TYPES

Test at least:

Mahakali Foods

Small CoC with financial creditors.

Premier Proteins

Larger committee / different composition.

This confirms that dynamic tables work for different member counts.

37. TEST FIRST AND SUBSEQUENT MEETINGS

Test:

First CoC Notice
First CoC Minutes

Second/Subsequent CoC Notice
Second/Subsequent CoC Minutes

Ensure the correct template is selected.

38. TEST CHECKLIST

At minimum verify:

Case data populates correctly

RP details populate correctly

CoC table generates correctly

Suspended directors populate correctly

Agenda transfers from Notice to Minutes

Attendance table generates correctly

User can enter discussion for each agenda

Resolution templates work

Voting percentages display

DOCX formatting is preserved

Draft/final versioning works

Notice can be emailed

Minutes can be emailed

Email is logged

Wrong case data never appears in another case

39. REPORT AFTER IMPLEMENTATION

Report:

Existing Components Reused

List them.

New Components Added

List them.

Word Templates Converted

List each template.

Database Changes

List migrations/fields.

Workflow Implemented

Explain Notice → Meeting → Minutes → Email.

Gmail Status

Working / partial / not configured.

Tests Run

List actual commands/results.

Formatting Limitations

State any Word formatting that could not be preserved exactly.

Next Recommended Improvement

Give only the highest-value next step.

FINAL REQUIREMENT

The aim is not simply to generate Word files.

The aim is to remove repetitive office work.

For a normal CoC meeting, the user should ideally only have to:

Create Meeting

Select/Add Agenda

Generate Notice

Review & Send

Conduct Meeting

Mark Attendance

Enter Actual Discussion

Enter Resolutions / Voting

Generate Minutes

Review & Finalise

Send Minutes

Everything else should come automatically from:

case database

CoC records

contacts

meeting information

templates

Build this into the existing application without AI and without paid dependencies.
